

## **ASSESSMENT OF LEARNING OUTCOME**

As the entire course is based on developing clinical skills, and are continuously assessed, those who lag are given additional help and guidance. They are also given additional clinical work to those who are poor performers. The faculties are encouraged to conduct surprise tests, viva to monitor the progress of the students. The feedbacks of the patients attended by the students are obtained, to ascertain if they treated them well and to their satisfaction. Student feedback of the confidence to practice all aspects of dentistry is obtained from them at the completion of their course.

Evaluating the academic performance and the feedback from the students and patients it is obvious that we are on the right path and we are achieving our course outcomes.

University result analysis- There is consistent increase in pass percentage over the years, with 99% pass percentage achieved by the regular batch students who appeared for the final year in august 2018 and 94% by the first and third years and 87 by the third year students.

So far out of 8 batch of students who have passed out many of the students have progressed to join PG , some have started their own practise, and some are working as consultants at hospitals, and some have gone abroad to do their further studies.

Course outcomes are made known to all the stake holders. The staffs work hard to achieve our goals. The result of these efforts of the staff and the management there has resulted in great success as proved by some of the achievements of the students given below

11 students have received Gold medals and University ranks since 2013
