Prof Dr Ravikanth H Jujare

Dr Ravikanth completed his master's degree in Prosthodontics in 2005. He is currently the module coordinator for MOFSc program and clinical supervisor for Doctor of restorative dentistry program at MAHSA University. He acquired his academic and clinical experience by teaching in various universities and as a consultant in India and overseas focused on Prosthodontics and Implant Dentistry. He received his Implant Fellowship and Prosthetic mastership from International Congress of oral Implantologists (ICO) affiliated programs. Has conducted several workshops in Fixed Prosthodontics and Basic implantology. His current interest is focused on clinical applications of digital technologies in modern dentistry.

Prosthetic Dentistry
Classification of Dental Implants

I. Based on placement within the tissues

- a. Sub-periosteal Implants
- b. Endosteal/ Endosseous implants
- c. Transosteal Implants

Subperiosteal Implant: Shows an implant placed on top of the jawbone, with a metal framework resting on the bone surface.

Endosteal Implant: Shows an implant placed directly into the jawbone, with a metal post extending through the bone.

Transosteal Implant: Shows an implant that passes through the entire thickness of the jawbone, with a metal post extending through the bone.

MAHSA UNIVERSITY

Prosthetic Dentistry

Healing abutment

In the two-stage (submerged healing) implant healing protocol, the implant is uncovered with incision or using a soft tissue punch after osseointegration with the bone, and the cover screw is replaced with a gingival former. The gingival former is left in place for a minimum for 2 to 3 weeks to achieve a healed soft tissue collar around the implant platform.
