EVENT REPORT AND PHOTOS

Child Psychology is a subdivision of Psychology that mainly deals with the mental care and conditions of children until the age of 16. Every child is unique and needs a different way of behaviour management. Learning Child Psychology helps to understand the child better and also makes it easier to diagnose problems of psychological origin. It helps alleviate dental fear & anxiety which in turn improves the treatment outcome for the child patient. The various theories of Child psychology were discussed and the implications of the theories in clinical practise were emphasized.

The lecture was followed by an interactive question answer session with the third year & final year students.
