- 106.SHRADHA DASS
- 107.ANITHA GAJENDRAN

## **EVENT REPORT**

### **Mastering the art of digital dental photography**

The primary purpose of Digital Dental Photography is recording accurately the clinical manifestations of the oral cavity. Secondary uses include legal documentation, publishing, education, communication with patients, dental team members, colleagues and technicians, and finally marketing. Each of these uses enhances and elevates the status of dental practice as well as improves delivery of care to patients. Dental photography must be considered as a diagnostic tool, similarly to X-rays, or other tests and investigations. So a complete set of oral images, is valuable to get to a certain diagnosis, to provide dental treatment options and is not only useful for recording a baseline of oral health.

Dr. Mayur Davda, gave an energetic talk on Digital dental photography and taught the nuances of documentation of Pediatric cases and Early Orthodontic diagnosis. The lecture was accompanied by demonstration of Photography session and interactive question and answer session through which the speaker shared his expert opinion and knowledge. The webinar also included a Pre-webinar and Post-webinar assessment of participants' knowledge on dental photography.
