

WORLD NO TOBACCO DAY - PHD

A Camp was conducted at Durgaiamma Temple near Chrompet. Nearly 200 people attended the camp, and their oral and general health status was examined, by evaluating their blood sugar, weight and blood pressure.

Tobacco consumption in any form is dangerous to our health. People need to be made aware of the ills of tobacco. World No Tobacco Day is the event dedicated to call attention towards the impact of tobacco use on public health and reduce individual tobacco dependence. Governments of all the countries across the world are imposing strict regulations on tobacco products.

Every year, on 31 May, WHO, its partners and the whole world mark World No Tobacco Day (WNTD), highlighting the health and additional risks associated with tobacco use, and advocating for effective policies to reduce tobacco consumption.

GOALS OF THE WORLD NO TOBACCO DAY 2017 CAMPAIGN

1. Highlight the links between the use of tobacco products, tobacco control and sustainable development.
2. Encourage countries to include tobacco control in their national responses to 2030 Sustainable Development Agenda.
3. Support Member States and civil society to combat tobacco industry interference in political processes, in turn leading to stronger national tobacco control action.
4. Encourage broader public and partner participation in national, regional and global efforts to develop and implement development strategies and plans and achieve goals that prioritize action on tobacco control.

Demonstrate how individuals can contribute to making a sustainable, tobacco-free world, either by committing to never taking up tobacco products, or by quitting the habit.
